

A new standard

XSPlatforms presents the next generation of modular suspended platform systems. A revolutionary concept: never before was a system this compact, safe and easy to use, answering the needs of both end users and rental firms. Our systems are in a league of their own.

Innovation... the XSPlatforms way

Innovation takes more than a smart idea. In our philosophy, innovation first of all takes a listening ear. Grasping the real needs of customers and users. While safety standards must never be compromised, we firmly believe that maximum security can go hand in hand with more ease of use, less maintenance and faster assembly methods.

The result: a modular suspended platform system without equal. With this system, XSPlatforms sets a new standard for working at height quickly, safely and efficiently.

The power of a total concept

XSPlatforms: one brand delivers it all. XSPlatforms is the partner of choice for customers seeking first-class total solutions providing maximum convenience. From initial advice to on the job training, we can supply everything you need - from standard products to solutions for the most complex projects. The possibilities are endless. Customers enjoy the convenience of having just one partner, and the confidence of knowing that that partner understands and cares for their business, responding to all their concerns and coming up with the best possible solution, time and again. We care for our customers, in every sense. That's why we develop and engineer our products as if our lives depended on them.

Taking you to the next level

Suspended Platform Systems

Safe

The system combines proven hoist technology with an innovative design that reduces the risk of mistakes in assembly to an absolute minimum. The side panels consist of one aluminium extrusion, without welds in critical places. Suspended platform systems by XSPlatforms meet and exceed the EN 1808-safety standard.

Compact

The foldable modules are easily connected, without the need for tools. A complete, 12-meter suspended platform requires only 13 parts. Once folded down, the modules are extremely compact, taking up minimal storage space. The same is true of the hoist units: easy to stack and with an adjustable-height suspension beam.

Easy to use

Suspended platform systems by XSPlatforms offer 20% extra width than traditional systems. The unique, patented side panel profile integrates several functionalities, including rails for tool holders and standard bolt heads, and makes it possible to mount accessories like wall-rollers and castors with a single flick of the wrist. And assembly is easier than ever, thanks to integrated connection pins and the innovative Twistlock guard rail post.

Minimal maintenance

Hoist and fall protection have been integrated in a single, enclosed and lockable suspension unit. This design offers maximum protection against wind and rain, which increases longevity and reduces the need for maintenance.

Modules are easily connected using an innovative frame with integrated guard rail post, without the need for tools or separate pins. The connection pins have been integrated into the connection frame. Linking the suspended platform to scaffolding materials is easy as well: the dimensions of the guard rail post are those of a standard scaffold tube.

One or two-meter long foldable modules integrate the floor, side frames and guard rails. Once folded down, the guard rails can be clicked onto the side frames.

Modules can be easily connected to form standard configurations of up to sixteen meters, carrying a maximum payload of 1200 kilograms. Users will experience a much larger working space thanks to the 70 cm inside width, 20% wider than usual in suspended platforms.

Connecting modules with a flick of the wrist: clicking the guard rails into place using the Twistlock guard rail post is all it takes to lock the modules.

A complete suspended platform takes up minimal space during transport. Modules are easily folded down and stacked. Four folded modules form a stack of less than 50 cm.

MODULES OF THE PLATFORMS	2 METER	1 METER
System length	2.0 m	1.0 m
Length of section	1.94 m	0.94 m
Outside width	780 mm	780 mm
Inside width	684 mm	684 mm
Module weight	46,2 kg	22,4 kg
(Connection frame weight)	12,2 kg	12,2 kg
Inside height of guardrail	1007 mm	1007 mm
Height of unit fold out	1084 mm	1084 mm
Height of unit fold in	146 mm	146 mm
System height of unit fold in	111 mm	111 mm

The XSPlatforms hoist unit is noiseless and is characterized by its unusually flat design. The hoist unit may be used as end stirrup or walk-through stirrup. The suspension beam is height-adjustable, offering more working space and saving storage space.
